

Christos Ringas

Gothenburg, Sweden | xristosriggas2@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFILE

Junior software developer with a Master's in Game Design and Technology (University of Gothenburg). Hands-on experience in C#/Unity and full-stack web (JavaScript, PHP, SQL), with projects including a split-screen multiplayer system, narrative and atmospheric experiences utilizing a custom dialogue authoring tool, and a browser-based multiplayer system using phones as controllers. Comfortable working in agile teams with Git, and looking for a junior software development role in games, interactive/simulation software, or web and backend development.

SKILLS

Languages	C#, C++, JavaScript, Java (basic), Python (basic), PHP, SQL (basic), HTML, CSS
Engines & Frameworks	Unity (Input System, Cinemachine, Animation Rigging, GraphView editor tools), Godot, OpenGL, p5.js, A-Frame, Flutter, Dart
Tools & Practices	Git, GitHub, MySQL, Apache/XAMPP, AJAX, Trello, Jira, Miro; Agile/Scrum, requirements engineering and documentation
Other	Arduino, Processing; Blender, 3ds Max, Aseprite, Adobe Photoshop, Illustrator, After Effects, Premiere

PROJECTS

Pigeons & Students – Projection-Mapped Multiplayer Game Undergraduate thesis, completed May 2023
Full-stack developer & designer, solo | [JavaScript](#), [p5.js](#), [PHP](#), [AJAX](#), [HTML/CSS](#) | [GitHub](#)

- Built a browser-based system where players join via QR code and use phones as controllers (including gyroscope aiming) against a projected game screen.
- Created a real-time PHP/AJAX communication pipeline; cut CPU load on low-power hardware by changing frame-tied polling to a throttled 100 ms refresh.
- Built an admin calibration dashboard to align game elements with a building facade; resolved iOS gyroscope permission (HTTPS) constraints.
- Showcased at the 16th Audiovisual Arts Festival 2023 and playtested live by 30+ users, including students, engineers, and university staff.

Forthright – 2-Player Split-Screen Third-Person Shooter Ionian University, Solo academic project
Unity (C#), Input System, Cinemachine, Animation Rigging | [GitHub](#)

- Built the full gameplay loop (locomotion, shooting, scoring, ragdoll deaths) for Practice and Versus modes.
- Designed the player as a reusable prefab so cameras, weapons, animation and audio stay isolated per player.
- Implemented simultaneous keyboard/mouse and gamepad input with Unity's Input System.
- Fixed a wall-sticking/jump-reset bug with wall-detection timing; added projectile drop and Cinemachine impulse recoil for game feel.

The Unfortunates – Narrative Adventure Game University of Gothenburg, Sep – Nov 2025
Gameplay programmer & systems designer, 6-person team | [Unity \(C#\)](#), [Git/GitHub](#), [Trello](#) | [Game page](#)

- Implemented 2D platforming movement, parallax, environmental interactions, and event-based dialogue actions.
- Co-developed the dialogue system (on a custom GraphView-based authoring tool) and the end-game statistics system.
- Worked in a shared codebase using agile practices; adjusted pacing and interactions based on playtesting feedback.

Loose Ends – Time-Loop Stealth Mystery University of Gothenburg, Nov 2025 – Jan 2026
Lead game designer & systems designer, 6-person team | [Unity \(C#\)](#), [Git](#), [Miro](#) | [GitHub](#) | [Game page](#)

- Designed and implemented an identity-switching disguise system that changes dialogue options and access to restricted areas.
- Built a keyword-based dialogue structure where topics unlock through eavesdropping, letters, and discoveries across loops.
- Designed the palace level layout and contributed to the evidence-board system for tracking clues.

Gamified Medication Adherence App Master's thesis, completed June 2026
Flutter developer & designer, 2-person team | [Flutter \(Dart\)](#), [Android/iOS](#) | [Thesis](#) | [GitHub](#)

- Developed a cross-platform mobile prototype (Android and iOS) in Flutter that helps people with cognitive impairments keep a consistent medication routine.

- Implemented onboarding and profile setup, a plan generator that builds a continuous daily intake schedule from the user's medication data, and medication logging, with data stored locally on the device.
- Built gamification features (a virtual pet assistant, streaks, unlockable rewards, customization) and reminder notifications to drive engagement.
- Evaluated the prototype through semi-structured interviews (n=10) and 3–5 day field testing; 7 of 10 testers reported more consistent medication intake, and notifications proved a stronger motivator, with gamification working best as a complement.

WORK EXPERIENCE

Teaching Assistant – Design and Construction of Digital Games

Jan 2026 – Mar 2026

University of Gothenburg

- Supervised student groups through their design and development process, giving technical and design guidance.
- Graded assignments and collaborated with teachers from the Game Design and Technology master's program.

Apple UK Phone Sales & AppleCare Representative

Jul 2023 – Aug 2024

Teleperformance Greece

- Diagnosed and resolved customers' technical device issues over the phone and explained products and services clearly to non-technical users.
- Handled sensitive customer data in line with GDPR (trained); met Team Member Score (TMS) targets with positive feedback.

EDUCATION

Master's in Game Design and Technology

Sep 2024 – Jun 2026

University of Gothenburg | [Program page](#)

Relevant coursework: Computer Graphics (OpenGL, C++), Simulation Engines (C# game engine), Game Development Project (Unity, Scrum), Requirements Engineering, Agile Development Processes, Gameplay Design, and academic research.

Integrated Master's in Audiovisual Arts

Sep 2018 – Jun 2023

Ionian University | [Program page](#) | Grade "Excellent" 9.35/10 (GPA 3.8)

Five-year program covering programming, game development (C#, Unity), Web Development apps/ Web sites (HTML, CSS, JavaScript, PHP, MySQL), Arduino and basic Java, VR/AR (A-Frame), and 2D/3D graphics.

LANGUAGES

Greek (native) | English (fluent)
